Industrial Style Digital Mass Flow Meters and Controllers for Gases

## › Introduction

Bronkhorst High-Tech B.V., the European market leader in low flow thermal and Coriolis Mass Flow Meters/Controllers, has many years experience in designing and manufacturing precise and reliable measurement and control devices. With a wide range of instruments, Bronkhorst offers innovative solutions for many different applications in many different markets. The instruments are made to customers' specification, in various styles, suitable for use in laboratory, industrial environment, hazardous areas and production machinery.

## › IN-FLOW series for industrial environments

The Mass Flow Meters of the IN-FLOW series are of rugged design (IP65) for use in pilot and production plants in industrial environments or even Zone 2 hazardous areas, with optional ATEX Category 3, FM Class I Div. 2 or KCs approval. Mass Flow Meters can be supplied in ranges starting from 0,014...0,7 ml<sub>n</sub>/min up to 11000 m<sup>3</sup><sub>n</sub>/h air-equivalent, with pressure rating between vacuum and 700 bar. In combination with control valves, either integrated or separate, Mass Flow Controllers can be offered up to 10...500 m<sup>3</sup><sub>n</sub>/h air-equivalent.

Today's IN-FLOW series are equipped with a digital pc-board, offering high accuracy, excellent temperature stability and fast response. The main digital pc-board contains all of the general functions needed for measurement and control. In addition to the standard RS232 output the instruments also offer analog I/O and a variety of fieldbus interface options.

## › Selectable gases and flow ranges

The IN-FLOW design features optional Multi-Gas / Multi Range functionality, providing (OEM-) customers with extra flexibility and process efficiency. Users of MFC's in pilot plants or laboratories can rescale their instruments on site, saving time and money; substantial costs for stock keeping, (dis)mounting and also for service and recalibration are no longer applicable. Our free and easy-to-use software tool 'FlowTune' enables the user to change the instrument's configuration swiftly via a computer.

## › Mass Flow Controllers for every application

The control valve can be furnished as integral part of an IN-FLOW MFC, or as separate component. It is a proportional, electromagnetic control valve with extremely fast and smooth control characteristics.

With reference to the specific field of application there are different series of control valves. There is a standard direct acting valve for common applications, a pilot operated valve for high flow rates, the so-called Vary-P valve with pressure rating 400 or 700 bar, that can cope with up to 400 bar ΔP and a bellows valve for applications with very low differential pressure.

## › General IN-FLOW features

- ◆ Weatherproof IP65 housing
- ◆ Optional: ATEX Cat.3, Zone 2, FM Class I Div. 2 or KCs approval
- ◆ Fast response, excellent repeatability
- ◆ Pressure ratings up to 700 bar
- ◆ Compliant with RoHS directives

## › Digital features

- ◆ Fieldbus interfaces:
  - ◆ DeviceNet™, CANopen®
  - ◆ PROFIBUS DP, FLOW-BUS
  - ◆ PROFINET, Modbus-RTU/ASCII
- ◆ Control characteristics user-configurable
- ◆ Optional Multi Gas / Multi Range functionality up to 10 bar
- ◆ Alarm and counter functions

## Notes

- ◆ Multi Gas / Multi Range is optional on low-flow IN-FLOW series and must be requested at the point of ordering
- ◆ Extended rangeability for digital communication only; turndown 50:1 when using analog I/O options
- ◆ The selected orifice of the control valve may limit the rangeability
- ◆ Standard accuracy (based on actual calibration): ±(0,5% RD + 0,1% FS);  
±0,8% Rd plus ±0,2% FS for F-110CI-005/F-200CI-005; ±2% FS for F-110CI-002/F-200CI-002
- ◆ Maximum range for gases not mentioned in this list; rule of thumb: nominal range for Air x Conversion Factor;  
e.g. F-111BI - 1K0: maximum range for SF<sub>6</sub> = 1000 x 0,27 = 270 ml<sub>v</sub>/min
- ◆ Minimum range for gases not mentioned in this list; rule of thumb: minimum range for Air x Conversion Factor;  
e.g. F-111BI - 1K0: minimum range for SF<sub>6</sub> = 400 x 0,27 = 108 ml<sub>v</sub>/min
- ◆ The Conversion Factors for these calculations can be extracted from Fluidat on the Net ([www.fluidat.com](http://www.fluidat.com)): Go to 'Flow calculations' and select 'Gas Conversion factor'. Select 'Fluid from' and make sure 'Fluid to' is Air. Select the applicable instrument model from the pulldown menu. Then press 'Calculate' and look up the conversion factor from the table.

## › Thermal mass flow measuring principle

The heart of the thermal mass flow meter/controller is the sensor, that consists of a stainless steel capillary tube with resistance thermometer elements. A part of the gas flows through this bypass sensor, and is warmed up by heating elements. Consequently the measured temperatures T1 and T2 drift apart. The temperature difference is directly proportional to mass flow through the sensor. In the main channel Bronkhorst applies a patented laminar flow element consisting of a stack of stainless steel discs with precision-etched flow channels. Thanks to the perfect flow-split the sensor output is proportional to the total mass flow rate.

## › Fields of application

The IN-FLOW series have been successfully applied in a wide variety of industrial applications, such as:

- ◆ Process gas measurement or control in food, pharmaceutical and (petro) chemical industries, in fermentation installations and in fuel cell technology
- ◆ Sample gas measurement
- ◆ Burner control
- ◆ Gas consumption measurement for internal accounting
- ◆ Making of defined gas mixtures

## › For low pressure drop and corrosive gases

For applications with only little differential pressure, Bronkhorst developed the LOW- $\Delta P$ -FLOW series mass flow meters and controllers, which can also be supplied with an IP65 (IN-FLOW) housing. In these instruments the flow resistance is minimized by using a large bore sensor in combination with a cylindrical flow splitter. Except for the resulting lower pressure drop, this construction also minimises the risks of clogging and facilitates the cleaning and purging of these instruments. Up to 50 l<sub>v</sub>/min air-equivalent, flow control applications with restricted delta-P can be handled with integrated LOW- $\Delta P$ -FLOW Mass Flow Controllers. For the control of higher flow rates at very low differential pressures Bronkhorst has devised special control valves with pressure compensation bellows (series F-004). These control valves are piped on to the flow meter while the electronic PI-control function is an integral part of the flow meter.
