

# LOW- $\Delta$ P-FLOW

Mass Flow Meters/Controllers for  
low pressure drop or corrosive gas service

## > Introduction

Bronkhorst High-Tech B.V., the European market leader in thermal Mass Flow Meters/Controllers and Electronic Pressure Controllers, has more than 30 years experience in designing and manufacturing precise and reliable measurement and control devices. With a wide range of instruments, Bronkhorst High-Tech offers innovative solutions for many different applications in many different markets. The instruments are made to customers' specification, in various styles, suitable for use in laboratory, industrial and hazardous areas, in such diverse applications as semiconductor and analytical installations, to name but two.

## > LOW- $\Delta$ P-FLOW series for low pressure drop or corrosive gases

In a number of applications for measuring and controlling gas flows there is only little differential pressure available and/or allowable. These are the applications for which Bronkhorst High-Tech developed the LOW- $\Delta$ P-FLOW series, in which the flow resistance is minimised by using a large bore capillary (thermal bypass sensor) in combination with a cylindrical flow splitter (laminar flow element). Based on this concept, mass flow capacities between 0...10 ml/min and 0...1000 m<sup>3</sup>/h can be measured. At a flow up to 2 l/min a pressure drop of less than 1 mbar is required.

Furthermore the larger flow channels minimise the risk of clogging and facilitate the cleaning and purging of these LOW- $\Delta$ P-FLOW instruments, which will contribute to a significantly longer lifetime when the instruments are used on corrosive gas service. All fluid wetted parts are of electro-polished stainless steel. Optionally the flow meter body, sensor and flow element can be supplied in Hastelloy or Monel.

## > For laboratory or industrial conditions

The LOW- $\Delta$ P-FLOW series are derived from the laboratory style EL-FLOW series, however they can also be supplied with a rugged IP65 (dust and waterproof) IN-FLOW housing, suitable for industrial environments. The latter are also ATEX Category 3, approved for use in Zone 2 hazardous areas. In addition to the standard analog I/O-signals and the RS232 connection, there is the possibility of integrating an interface board with DeviceNet™, PROFIBUS DP, EtherCAT®, PROFINET, Modbus or FLOW-BUS protocol.

## > Mass flow control with low differential pressure

The control of mass flow with small pressure difference comprises the LOW- $\Delta$ P-FLOW Mass Flow Controllers in compact construction (model series F-200/201/202). The integrated proportional, electromagnetic control valves of these MFC's have extremely fast and smooth control characteristics. Depending on the operating properties, the maximum flow in these models is 1...50 l/min air-equivalent.

For the control of higher flow rates at very low differential pressures Bronkhorst High-Tech have devised special control valves with pressure compensation bellows (series F-004). These control valves are close-coupled to the flow meter while the electric PI-control function is an integral part of the flow meter. This F-004 valve has proven to be an excellent alternative to large, slow and expensive servo driven valves.

## > LOW- $\Delta$ P-FLOW features

- ◆ very low pressure drop
- ◆ suitable for corrosive gases
- ◆ wetted parts: electro-polished stainless steel; other on request
- ◆ also available with IP65 housing, ATEX approval Cat.3, Zone 2
- ◆ analog and digital (fieldbus) communication
- ◆ alarm and counter functions

## > Technical specifications

### Measurement / control system

Accuracy (incl. linearity) (based on actual calibration)	: $\pm 1\%$ FS (of Full Scale)
Turndown	: 1 : 50 (2 ... 100%)
Repeatability	: < 0,2% Rd (of Reading)
Settling time (controller)	: standard: 2...3 seconds
Control stability	: < $\pm 0,1\%$ FS (typical for 1 l <sub>n</sub> /min N2)
Operating temperature	: -10...+70°C
Max. operating pressure	: 10 bar
Temperature sensitivity	: 0,1% FS/°C; for ATEX Cat.3 max. 50°C
Pressure sensitivity	: 0,1%Rd/bar typical N2
Leak integrity	: tested < 2 x 10 <sup>-9</sup> mbar l/s He
Mounting position	: horizontal
Warm-up time	: 30 min. for optimum accuracy; 2 min for accuracy $\pm 2\%$ FS

### Mechanical parts

Material (wetted parts)	: stainless steel, other on request
Process connections	: compression type or face seal couplings; wafer type on series F-106; DIN or ANSI flanges on series F-107
Seals	: standard: Viton® options: EPDM, Kalrez® (FFKM)
Ingress protection (housing)	: IP40 or IP65

### Electrical properties

Power supply	: +15...24 Vdc
Max. power consumption	: Supply at voltage I/O at current I/O
Meter	: 15 V 95 mA 125 mA
	: 24 V 65 mA 85 mA
Controller	: 15 V 290 mA 320 mA
	: 24 V 200 mA 215 mA
Extra for fieldbus:	PROFIBUS DP : add 53 mA (at 15 V) or 30 mA (at 24 V)
(if applicable)	PROFINET : add 76 mA (at 15 V) or 48 mA (at 24 V)
	EtherCAT® : add 66 mA (at 15 V) or 41 mA (at 24 V)
	DeviceNet™ : add 48 mA (at 24 V)
Analog output/command	: 0...5 (10) Vdc or 0 (4)...20 mA (sourcing output)
Digital communication	: standard: RS232 options: PROFIBUS DP, DeviceNet™, PROFINET, EtherCAT®, Modbus-RTU/ASCII, FLOW-BUS
Electrical connection IP40 configuration	
Analog/RS232	: 9-pin D-connector (male);
PROFIBUS DP	: bus: 9-pin D-connector (female); power: 9-pin D-connector (male);
DeviceNet™	: 5-pin M12-connector (male);
Modbus/FLOW-BUS	: RJ45 modular jack
EtherCAT®/PROFINET	: 2 x RJ45 modular jack (in/out)
Electrical connection IP65 configuration	
Analog/RS232	: 8 DIN (male);
PROFIBUS DP	: bus: 5-pin M12 (female); power: 8 DIN (male)
DeviceNet™	: 5-pin M12 (male)
Modbus/FLOW-BUS	: 5-pin M12 (male)

Technical specifications subject to change without notice.

## > Models and flow ranges (based on Air)

### Mass Flow Meters (MFM)

Model	min. flow	max. flow
F-100D/F-100DI	0,2...10 ml <sub>n</sub> /min	0,44...22 ml <sub>n</sub> /min
F-101D/F-101DI	0,42...21 ml <sub>n</sub> /min	0,042...2,1 l <sub>n</sub> /min
F-101E/F-101EI	0,028...1,4 l <sub>n</sub> /min	0,24...12 l <sub>n</sub> /min
F-102E/F-102EI	0,17...8,5 l <sub>n</sub> /min	1...50 l <sub>n</sub> /min
F-103E/F-103EI	0,9...45 l <sub>n</sub> /min	4...200 l <sub>n</sub> /min
F-106Z/F-107Z	0,2...10 m <sup>3</sup> <sub>n</sub> /h	20...1000 m <sup>3</sup> <sub>n</sub> /h

### Mass Flow Controllers (MFC)

Model	min. flow	max. flow
F-200DV/F-200DI <sup>1)</sup>	0,2...10 ml <sub>n</sub> /min	0,44...22 ml <sub>n</sub> /min
F-201DV/F-201DI <sup>1)</sup>	0,42...21 ml <sub>n</sub> /min	0,042...2,1 l <sub>n</sub> /min
F-201EV/F-201EI <sup>1)</sup>	0,028...1,4 l <sub>n</sub> /min	0,24...12 l <sub>n</sub> /min
F-202EV/F-202EI <sup>1)</sup>	0,17...8,5 l <sub>n</sub> /min	1...50 l <sub>n</sub> /min

<sup>1)</sup> Kv-max = 6,6 x 10<sup>-2</sup>

### Control Valve series F-004

	F-004AC/F-004AI	F-004BI
Kv-value	0,3	1,0
Max. operating pressure	10 bara	10 bara
Min. ΔP (approx.)	1 mbard	1 mbard
Max. ΔP	5 bard	5 bard
Max. power (at 15 Vdc)	3,5 Watt	3,5 Watt
Protection class	F-004AC: IP40	IP65
	F-004AI: IP65	

Models F-004BI and F-004AC bellows operated control valves

## > Conversion factor calculations for model selection

To select the right model for other gases than Air, we have to carry out two calculations:

$$1. \quad \phi_{vn} \text{ Air} = \frac{\phi_{vn} \text{ gas}}{\text{conversion factor}}$$

$$2. \quad \phi_{vn} \text{ Air} = \frac{\phi_{vn} \text{ gas}}{\text{viscosity factor}}$$

The highest flow rate calculated determines the flow capacity.

Example: Freon-22, 1 l<sub>n</sub>/min

Conversion factor = 0,49 (see table below)

Viscosity factor = 0,34 (see table below)

$$1. \phi_{vn} \text{ Air} = 1/0,49 = 2,04 \text{ l}_n/\text{min}$$

$$2. \phi_{vn} \text{ Air} = 1/0,34 = 2,94 \text{ l}_n/\text{min}$$

Highest flow rate = 2,94 l<sub>n</sub>/min so we can select model

F-101E or F-101EI MFM resp. F-201EV or F-201EI MFC.

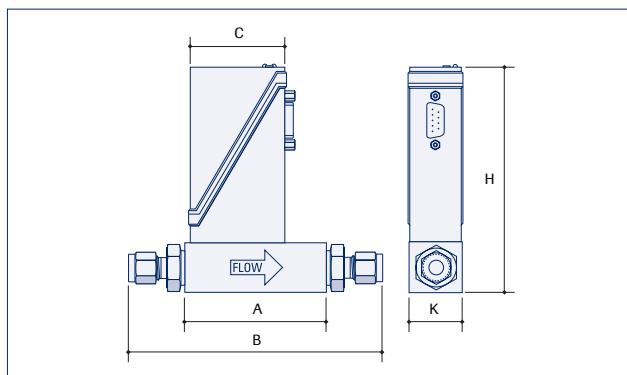

F-201EI LOW-ΔP-FLOW Mass Flow Controller, IP65 configuration

F-106CZ Mass Flow Meter

## > Fields of application

The LOW-ΔP-FLOW series have been successfully applied in a wide variety of both OEM and laboratory applications, e.g.:

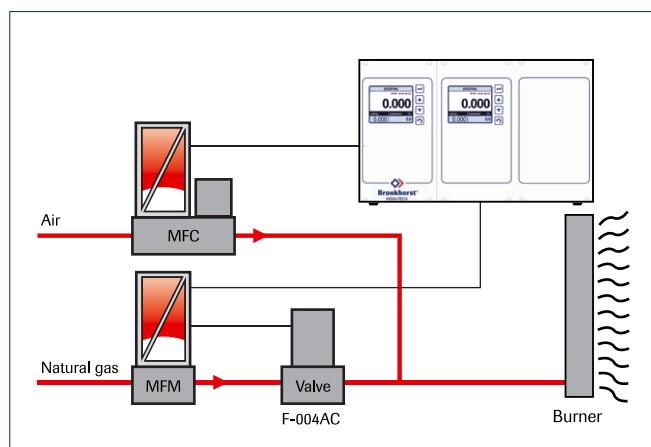

- ◆ Environmental air sampling at atmospheric conditions
- ◆ Leak rate and permeability measurements
- ◆ Burner control
- ◆ Measurement of gas consumption, for example of natural gas, in low pressure gas distribution systems

## > Air sampling

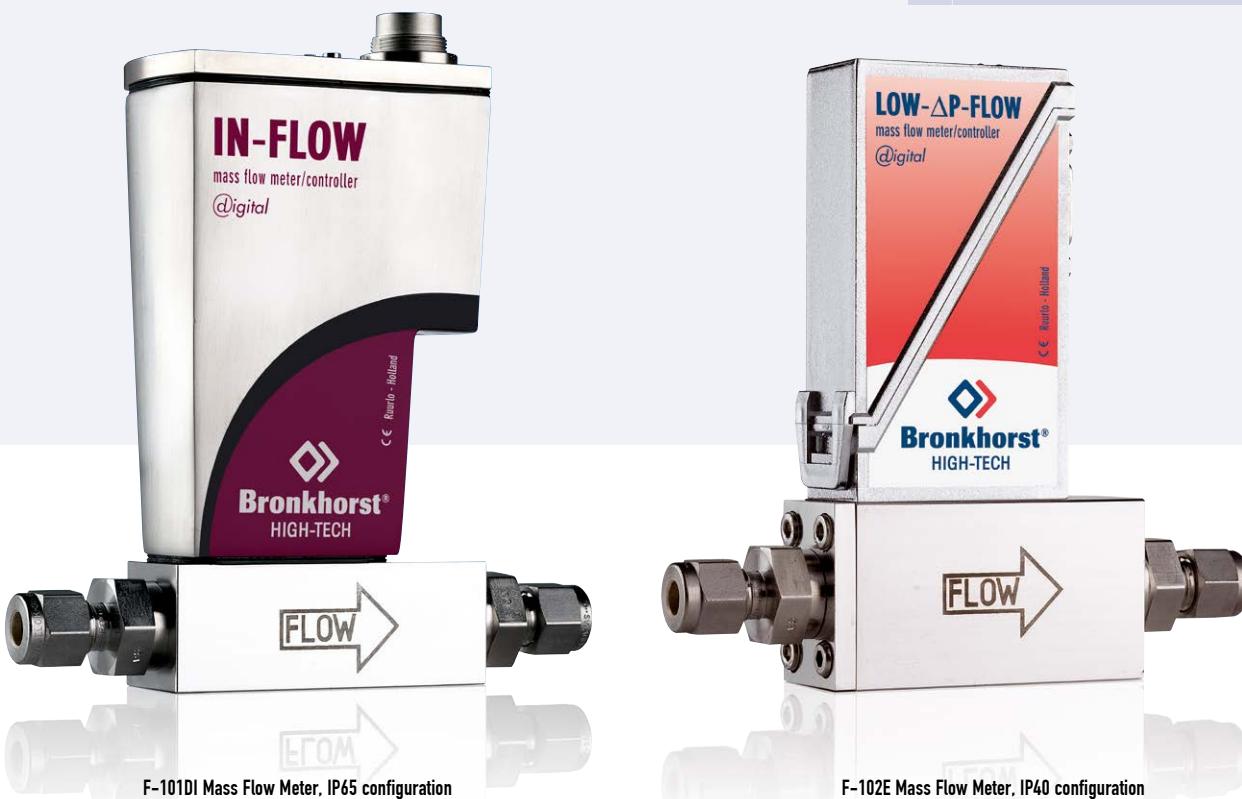

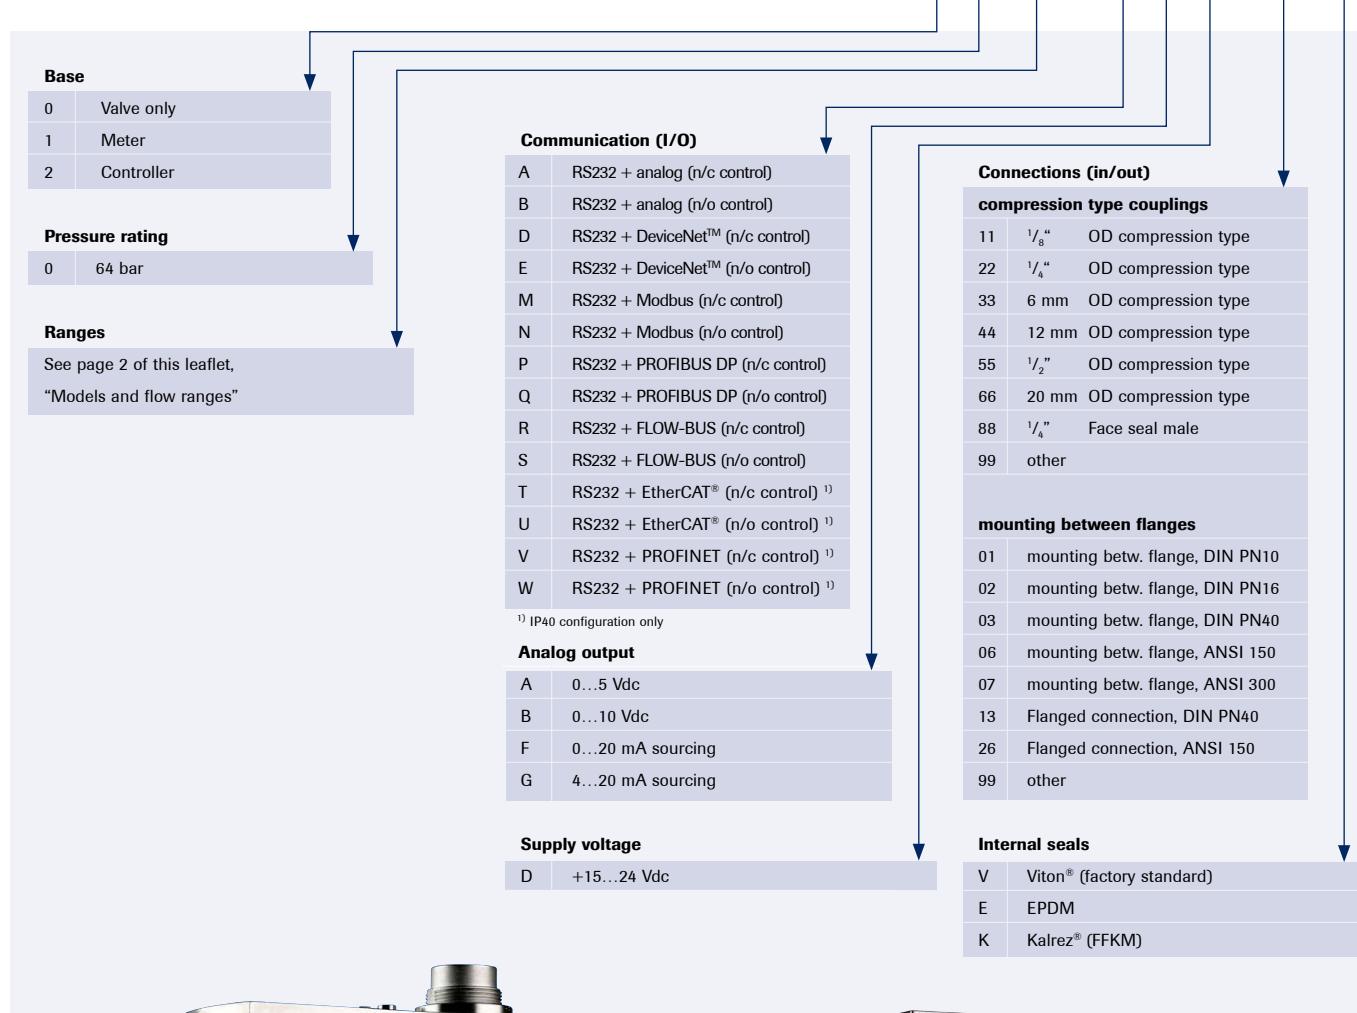

An interesting example to control a flow rate is using a LOW-ΔP-FLOW Mass Flow Meter in combination with a sampling pump. In this configuration the speed of the pump is controlled to obtain the required mass flow rate, determined by the setpoint value.

## > Burner control

Burner control using Mass Flow Controllers brings many advantages compared to conventional systems, where flow is adjusted through needle valves. When burner orifices get clogged or when gas supply pressure varies, an MFC will automatically adapt to the changed conditions. For the control of relatively large flows with low differential pressure, which is typical for natural gas or CH<sub>4</sub>, LOW-ΔP-FLOW Mass Flow Meters in combination with F-004 pressure compensated bellow valves have proven to be a successful solution.
